Street Data meets/exceeds program threshold

*Average Daily Traffic (ADT): the volume of traffic traveling on the street, in both directions, during a period of time, divided by the number of days in the period. The minimum criteria (600 ADT) is both a best practice from the collective experience of existing municipal programs and the maximum volume designated for a healthy neighborhood street per the Local Government Commission/Center for Livable Communities publications.

**85th Percentile Speed: the speed that 85 percent of drivers travel at or below; serves as a standard measure used to evaluate traffic speed conditions. The minimum criteria (30 mph) is also based on best practices from other existing municipal programs. Typically, when this speed metric exceeds the posted limit by more than 5 mph, it is an indication that a majority of the traffic (>50%) is exceeding the limit.
